

CS 1632 – DELIVERABLE 3: Automated System Testing of a Web Application

There were several issues that I faced while implementing this program. One of my biggest problem was my inexperience with HTML. I had learned it in high school, but that was an introduction course that did not go deep into the language. Thus, learning the `<table>` HTML tag. Learning this tag didn't take much time as my prior knowledge with the basic format helped me grasp this quickly. Second issue I faced was figuring out how to implement the truth table. Hence the first thing that came to my mind was to place all the things on the display and manage it through an array. I made this array accessible to the `main.erb` file, which acts as the main page for this project, and is in charge of printing the truth table. In order to print everything to screen, I used a for-loop which ran from 0 to the $2^{(\text{table size})}-1$. Then I had to print it on the screen with the correct computation. This brings us to next issue I faced. This was the computation of the AND, OR. I only include these two operators because the other two are complete opposite of them, hence it would be easier to just negate the values from AND, OR computation if it worked. Over all I would say that this deliverable made me brush-up on my HTML knowledge, and it was fun coding this to completion.

Traceability Matrix

| Requirements | Test Case |
|--------------|--|
| 1 | 1. test_table_button |
| 2 | 1. test_main_page 2. test_table_link 3. test_error_parameter 4. test_error_address |
| 3 | 1. test_back_to_main_link_table |
| 4 | 1. test_string_false_parameter 2. test_string_true_parameter 3. test_string_size_parameter 4. test_same_value 5. test_table_size_one |
| 5 | 1. test_valid_heading 2. test_true_false_symbols |
| 6 | 1. test_AND_function 2. test_OR_function 3. test_NAND_function 4. test_NOR_function |
| 7 | 1. test_default_true 2. test_default_false 3. test_default_size 4. test_all_default_values |
| 8 | 1. test_incorrect_url |
